🌀 CarickAtezong

Summary

I am a Master's student in the Computer Science department at the University of Yaoundé 1, Cameroon under the supervision of Dr. Jiomekong Azanzi and co-supervision of Dr. Oktie Hassanzadeh. I'm currently working on Table Interpretation by using Neuro Symbolic AI approach. I am also a full-stack developer with more than 3 years of experience. Self-taught and passionate about new technologies, I am contributing to software engineering, artificial intelligence and knowledge engineering. I am very open to learning and I like sharing what I know.

Education

2023/09 – present Yaounde, Cameroon	Master in software engineering University of Yaounde 1
2020/09 – 2023/07 Yaounde, Cameroon	Bachelor's degree in computer science, information systems and software engineering University of Yaounde I
2012/09 – 2019/07 Yaounde, Cameroon	High School Certificate Bilingual High School of ETOUG-EBE

Experience

2024/07 – present Yaounde, Cameroon	AI trainer <i>Localhost Academy</i>  My main objective is to teach students the basics of AI, while keeping a practical focus by exploring the following concepts: • Machine learning • Deep Learning (CNN, MLP, RNN) • LLM (Large Language Model)
2024/06 – 2024/09	LLMs4OL Challenge • I got the highest score of the challenge : 99.37 • Took first place in Term typing for the Wordnet dataset • Published an article for this challenge • During this challenge, my main objectives were: - Task A -Term Typing: Discover the generalized type for a lexical term. - Task B - Taxonomy Discovery: Discover the taxonomic hierarchy between type pairs.

- **Task C - Non-Taxonomic Relation Extraction:** Identify non-taxonomic, semantic relations between types.

2024/03 – 2024/10

SEMTAB CHALLENGE

- Published an article for this challenge
- During this challenge, my main tasks were:
 - **CTA Task (Column Type Assignment):** Assign a semantic type (a DBpedia class) to a column in a table.
 - **CEA Task (Cell Entity Assignment):** Match a cell to a Wikidata entity.
 - **CPA Task (Column Property Assignment):** Assign a KG property to the relationship between two columns.
 - **Table Topic Detection:** Assign a KG class to a table.

2022/06 – 2022/12

Full Stack Developer

Ubora Studio [↗](#)

- Development of APIs.
- Development of front-end web applications to consume these APIs.
- Development of a dashboard for an online course website.
- Integration of third-party APIs.
- Technologies: ReactJs, NodeJs, express, codeigniter 3.
- Development approach: Scrum.

2021/06 – 2021/10

FrontEnd Developer

Ubora Studio [↗](#)

- Creation of figma maquettes.
- Creation of user interfaces inspired by my mock-ups and those of other designers.
- Creation of front-end web applications to consume APIs.

2022/07 – present

FrontEnd Developer

Freelance

- *Creation of mobile applications.*
- *Creation of websites.*
- **Technologies:** ReactJs, NextJs, NestJs, Flutter, Docker, Kubernetes, Django.

Personal Projects

2024/01 – present

frivia-app

- A quiz game where you can choose the level of difficulty. Provider State Management, Change Notifiers, Web Requests & Fonts.
- **Technologies:** Flutter
- **Github repository :** [frivia-app](#) [↗](#)

2023/05 – present

Find A Job

- Web application enabling job seekers to search for work and companies or individuals to post job offers.
- Link frontend: <https://find-a-job-front.vercel.app/> [↗](#)

2024/02

PDFTableExtractor-XLS

- Python program for extracting tables from a pdf file and creating xls files for each table extracted with good accuracy that is constantly being improved.
- **Technology:** Python
- **Github repository:** [PDFTableExtractor-XLS](#) [↗](#)

2024/03	wikifood_kenya • Interactive web application designed to explore and manage a collection of traditional Kenyan dishes. Using ontology technology to structure data, the application enables users to view, search and add information about different dishes and their ingredients. • Front end: HTML, CSS, JavaScript, TailwindCss • Knowledge graph technologies: Protege, Jena fuseki • Github repository: wikifood_kenya
2023/09 – 2024/03	school-attendance-system • An application for identifying students by facial recognition at the entrance to examination rooms using a cell phone. • Backend: Python, Django, OpenCV, FaceRecognition • Front end: Flutter, Dart • Github repository: school-attendance-system
2021/09 – present	OpenSource project • All my other projects are on my github

Skills

PYTHON	Kaggle
Javascript	NEXTJS
REACTJS	HTML5
CSS3	React Native
NODEJS	ExpressJS
NLTK	PyTorch
Jena fuseki	Protege
SPARQL	BERT
scikit-learn	Flutter
NESTJS	Php
pandas	Transformers
Codeigniter	Sass/Scss
opencv	AHP
TailwindCss	Figma
UML	MYSQL
MONGO DB	Talend Open Studio
C	Postgresql
LLMs fine-tuning	Google colab

Languages

- French
- English

Organizations

2021 – present
Yaounde, Cameroon

Google Developer Students

Publications

2024/10/02

TSOTSALearning at LLMs4OL Tasks A and B : Combining Rules to Large Language Model for Ontology Learning
Open Conference Proceedings
Author: Ymele, Carick and Jiomekong, Azanzi,
doi: 10.52825/ocp.v4i.2484 [↗](#)
